Consumption Patterns

An ESRC Data Investment

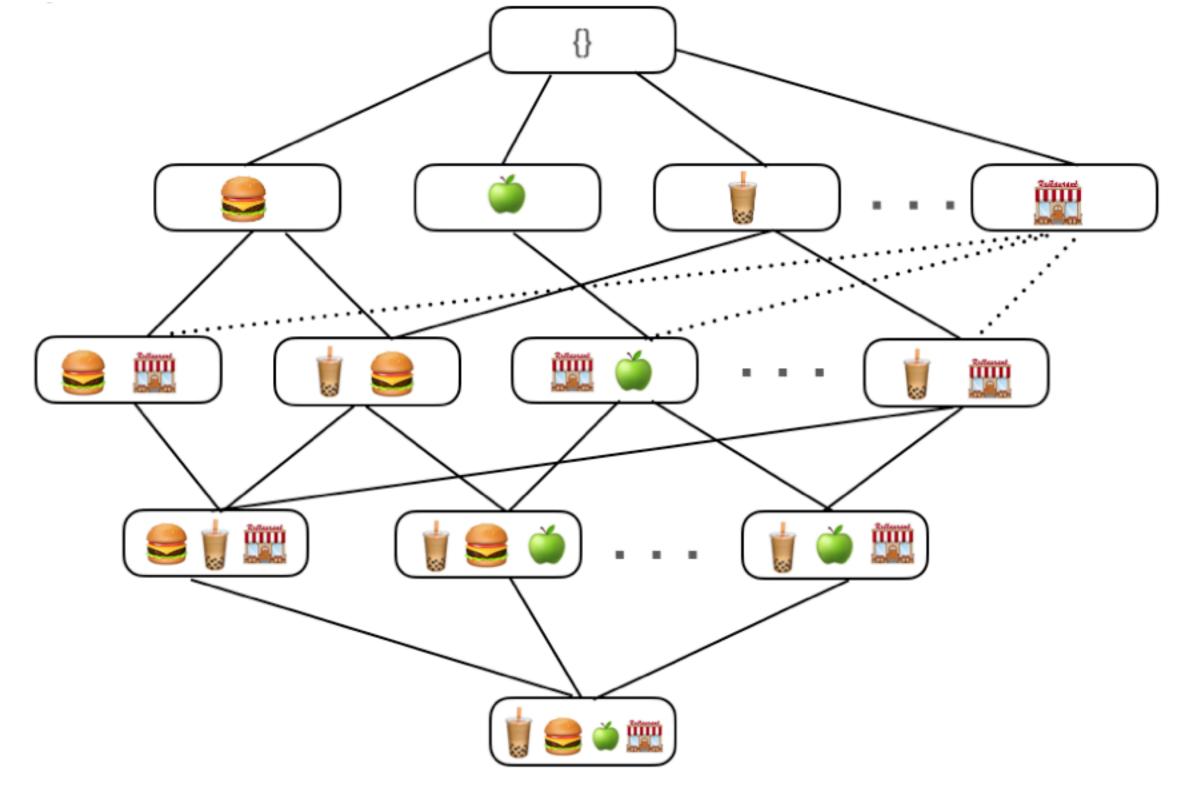

Possible association rules $\approx 3 \times 10^{31}$

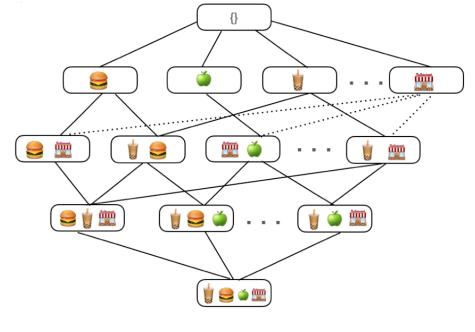

Most rules are redundant and uninteresting

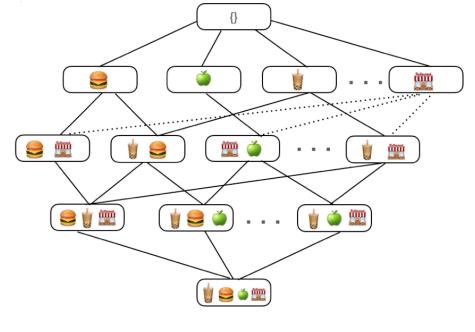

2. Regional-specific rules may be neglected

3. Too many rules to be compared -

4. Inconsistent attributes-value pairs to compare between groups

Countryside living

Inner city cosmopolitan

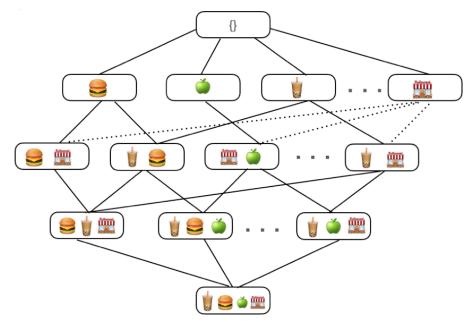

Industrious communities

Consumption Patterns

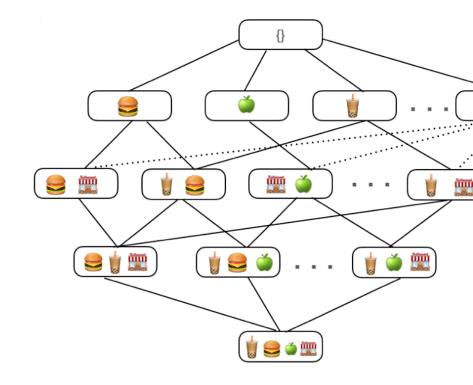

Possible association rules $\approx 3 \times 10^{31}$

- 1. Most rules are redundant and uninteresting
- 2. Regional-specific rules may be neglected
- 3. Too many rules to be compared -
- 4. Inconsistent attributes-value pairs to compare between groups

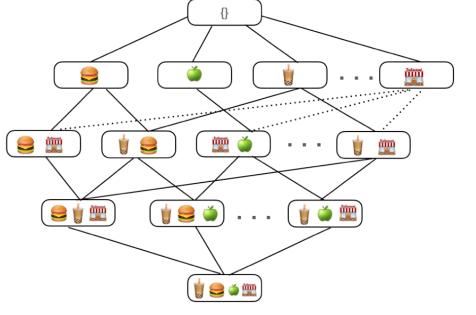

Inner city cosmopolitan

Countryside living

Industrious communities

Defining Derivations

- 1. Identifying the consumption patterns that differentiate regional and geodemographics groups
- We want to find the Surprising rules (contrast-set) that are Significant and Large across groups, while neglecting rules that are redundant and universal.
